

Channel Dredging Update – December 2019

The channel dredging project at PCT is entering a monitoring stage after having completed the dredging and berm maintenance activities in September this year. All the material that was dredged from the navigational channel and the turning basin has been placed behind the under water retention berm where it will remain. While no further dredging is currently planned, PCT has applied for and received a Disposal at Sea permit to conduct limited additional dredging activities should monitoring show that additional work is required.

We would like to thank the local residents and the users of the inlet as we appreciate everyone's patience and understanding during this project.

PCT will continue to keep the community updated through our website and our Channels newsletter. Should you require additional information on the terminal expansion and construction project, or if you would like to register a concern with the project, please visit our website www.pct.ca or call 604-939-7371. After business hours please call 604-931-9211. Thank you for your continued patience.
